

AMENDMENT TO THE ABSTRACT

Please replace the Abstract with the following new Abstract:

The invention relates to a dental suction apparatus for suctioning fluids and debris from the mouth cavity of a patient during a treatment. The apparatus has a hollow base body with a longitudinal axis X-X that includes an outer surface, an inner surface, and a suction port. A mirrored surface is disposed on the inner surface of the suction port so that at least parts of the mouth cavity can be viewed through the suction port.
